

Stomal Therapy Solutions

Skin cleansing wipes

When cleansing the skin around your stoma it is important, if using wet wipes, that they do not leave any oils or moisturisers on the skin as this will compromise the adhesion of the new appliance.

An R1 form can be completed by myself or any other stomal therapy nurse to access skin cleanser wipes through the Stoma Appliance Scheme.

Alternatively, there are multiple water only wet wipes available from supermarkets and pharmacies. Please read the packaging carefully to ensure they contain at least 99% water with no added oils or moisturisers.

If you have any ongoing or new concerns, please contact to book a further review.
